SMARTPHONE CLASS HANDOUT

Share photos with your family, privately

A private shared album keeps the family's photos in one place, for the people you choose. It works on any phone.

1. **Join the album**
   Scan the QR code with your camera, or tap the invite link. Sign in with your Apple or Google account, or your email.
2. **Look at the photos**
   Scroll through the album. Tap a photo to see it large, and tap a video to play it.
3. **Reply**
   Tap the heart, or write a comment. The family sees it right beside the photo.
4. **Add a photo**
   Tap Add, choose photos from your phone, and they appear for everyone in the album.
5. **Ask your family**
   Send them the link with a short message: "I'd love to see your photos. Could you add some here?"
6. **Stay private**
   Only the people in the album can see it. You can leave an album at any time. Ask before you add photos of other people.

MY NOTES

My family album _____

Who I'll ask for photos _____

My phone signs in with ☐ Apple ☐ Google ☐ Email

Get Lumo

In class we use Lumo as the example: free on iPhone, iPad and Android, and in a web browser at app.lumomagic.com. The same steps work in other shared album apps.
